About Me

I am a current graduate computer science student at the University of Texas at Dallas with a focus on intelligent systems. During my undergraduate studies in physics I operated a sole proprietorship that provided various IT and software development services on a contract basis. My responsibilities initially included the remote administration of computer and CCTV systems for locations across the state of Texas. I would routinely need to convey abstract ideas and troubleshooting steps over the phone to individuals with little or no knowledge of computers. These roles honed my ability to solve problems and communicate effectively. Through self teaching of computer science concepts I would go on to tackle software development contracts with a focus on IoT applications. Specifically, I developed software and firmware in C, C++, and Python for both SBCs and microcontrollers.

Why Me?

My non-traditional background in physics and the biological sciences will allow me to contribute a unique perspective to your endeavors. Additionally, the self-teaching and communication skills I developed while growing my sole proprietorship will allow me to quickly adapt to the responsibilities of this position and work effectively as a member of a team. I also bring a familiarity with hardware design that will prove useful when making implementation decisions regarding machine learning models.

Sincerely,

Scott Chase Waggener
